

Abstract

5 The invention relates to a highly abrasionproof and sound-absorbing strip for
armouring cable harnesses, especially in motorcars, said strip consisting of a backing
comprising a first covering layer A that is joined to a second layer C over the entire
surface of the covering layer A in a fixed manner. According to the invention, the
covering layer A consists of suede, a non-woven fabric, a woven fabric or a knitted fabric,
especially a PET filament fabric or a polyamide fabric, and the layer C consisting of a
10 porous flat structure such as a textile having an open, but stable, three-dimensional
structure, a foam or an expanded film.
